## SAAB 340 & SAAB 2000

Saab Aerotech support major airlines as well as single-aircraft operators and for more than two decades we have been an acknowledged industry leader in supporting our operators in the global marketplace. Whether you are preparing to take an aircraft or looking to optimize your existing operation, Saab Aerotech can provide factory training solutions for your every need.

Knowledge is the key to your success. Through a learning organization you can influence your company in a positive way and promote safe and reliable operation of your aircraft. Do you feel that knowledge will help you run a smooth and efficient operation? Do you want to have dedicated and competent personnel who know exactly what to do in all different situations that can occur during your Saab 340 and Saab 2000 operations? Then Saab Aerotech Customer Training is the answer.

#### A COMPLETE TRAINING PARTNER

We have maintained our own training department for over ten years with experienced instructors divided into two main areas of expertise – electrical/avionics and airframe/power plant. We provide complete aircraft type training and other types of courses, designed to help you in your daily operation. With over twenty years of experience from design and production of the finest aircraft in the industry, the knowledge among our engineers has become a great source of expertise for training at Saab Aerotech. This puts us way ahead of the competition when it comes to being able to provide first-class training, and the only one providing factory training.

#### A COMPLETE RANGE OF MAINTENANCE TRAINING PROGRAMS

Our Training Center holds EASA Part 147 approval for the ratings B1, B2 and B1+B2 for both the Saab 340 and the Saab 2000. Furthermore we hold national approvals from Transport Canada and the Civil Aviation Safety Authority in Australia (CASA). The Type Courses are intended for Line Maintenance Technicians or staff with good technical background. After having completed a Type Course participants will be able to explain, operate and repair the Saab 340 and/or Saab 2000 aircraft systems in accordance with maintenance procedures, as well as troubleshoot and isolate failures to specific Line Re-placeable Units (LRUs). Participants will also be able to locate the major

components for the aircraft and replace the LRUs. Written examinations ensure that all participants have absorbed the required knowledge. By bringing this knowledge into your organization where you can use it, you will save time and money and improve your efficiency.

Aircraft Brush-Up Courses are also available for your line maintenance technicians. The courses refresh the knowledge of the various systems and functions to people who have attended a Type Course in the past.

Aircraft Familiarization Courses are available for personnel other than your line maintenance technicians. The courses describe the basic aircraft and its function to people with a limited technical background.

#### ADAPTED TO YOUR SPECIFIC NEEDS

When participating in a Saab Aerotech Training Course, you gain access to, and the full attention of, a team of professionals. This opens doors to areas of expertise beyond the actual training syllabus and makes it possible to bring that additional knowledge into your own organization as well.

Training can be held either on-site or at our facilities in Linköping, Sweden. Our Training Center is also fully equipped with aircraft parts and components to aid in understanding the aircraft and systems.

Courses are taught in either English or Swedish and our flexibility and ability to keep the customer in focus guarantees that any specific requests you may have are taken into account when the course is put together. We are here to support you.

Saab Aerotech Customer Training will give you the following advantages:

- A complete Saab 340 and Saab 2000 training program
- Experienced Saab 340 and Saab 2000 instructors
- Back-up from the Saab engineering force
- Factory training at Saab Aerotech in Linköping, Sweden or at your facility.

#### A SUCCESSFUL TRACK RECORD

We have had satisfied customers coming back to us for many years, and we plan to keep it that way well into the future. Examples of operators recurrently trained by Saab Aerotech instructors are:

- Régional CAE
- Skyways
- Colgan Air
- Swedish Air Force
- Lithuanian Airlines
- Golden Air
- Blue1
- Corporate Express
- Peninsula Airways
- Carpatair
- Macair
- Norse Air
- Hendrick Motorsports
- JCAB
- Newcom

The courses offered by Saab Aerotech are high in quality and provide excellent value for money. Whether you are looking for a smooth start-up of your operation or additional training to improve your existing capability, we can assist with the right training program to meet your needs.
